Greetings and Salutations,

It took a while but I finally got the little homebrew (of some years back) 6T9 tx on the bench and fired up. It works! Been in a well house a long time and will require some cleaning but it works inspite of its poor storage. Saw almost 5 watts on the 50 watt Bird hf slug into the Heath Antenna. The Drake R4B on the bench reported a clean crisp note even under high speed J38 keying! No chirp or shift and firm but not harsh or clickey keying. All above with a 7100 kcs xtal.

Earlier I had been digging in my coil box and found the Millen bar jack plug with the 80 meter coil mounted on it and in good condition. The 40 meter coil had gone with the tx and luckily the 80 meter coil had stayed with me. Now I will have to dig around and see what I have in the way of

rocks for 80 and 40. I had to order an xtal from Jan last week and put on a 7040kcs rock (was it HC16??)for 13.00 bux to make minimum. That should be here in a couple weeks.

When I built this little tx I used all new parts and built it exactly as the one shown in the pubs. Even the round hole on top of the home made cabinet with the perforated stock above the tube is there. I painted the cabinet black and the panel a dark grey. At one time I had the bottom plate with the four nipples on it for feet but it is gone. I can probably pay big bux and get another though.

Anyway, thats the up to the minute report on the 6T9. I expect in a few days to maybe hook it to an antenna and see what happens. I worked a lot of qsos with it before and should be no differant now. Neat little tx.

P.S. Yep, if you look down on the hole in the cabinet you can see those two little orange eyes lookin back at ya from inside.

Hi all;

i'm looking for the tube *book* (not the roll chart) that goes with the TV-2A/U tube tester,
this is the book that gives all the settings for the various tubes. if you have or know where i can find one,
(cash or trade) please let me know.

Thanks.
